# Lamps and Ballast

Today's lighting systems are more energy efficient and environmentally friendly than ever before. Nevertheless, hazardous materials, such as mercury, may be contained in lighting waste. Environmental regulations require this waste be managed properly. Failure to follow regulations could result in costly environmental liability and adverse publicity.

### **NOTES**

# **Batteries**

Every year, billions of used batteries that may contain corrosive materials such as potassium hydroxide (lye) or sulfuric acid; reactive metals such as lithium; or toxic metals such as mercury, lead, cadmium and nickel are thrown in the trash. Batteries can contaminate our environment if managed improperly.

Recycling batteries eliminates the risk of personal injury or loss of property and prevents pollution, thereby reducing the risk of future financial liability associated with improper disposal.

# Damaged, Defective or Recalled Lithium Batteries

Batteries can become damaged several ways, including exposure to different elements, temperatures or even accidental impact. Lithium cells or batteries, that have been damaged or identified by the manufacturer as being defective for safety reasons, have the potential of producing a dangerous evolution of heat, fire, or short circuit.

#### **IMPORTANT NOTES:**

- Lithium Ion and Lithium Metal batteries CANNOT be commingled. A separate kit must be purchased for each type of battery.
- Each battery needs to be contained in its own anti-static bag. Anti-static bags are provided with the kits in the sizes identified in Table 1 above. The number of bags provided equals the maximum number of batteries allowed in the kit.
- Different sizes of batteries of the same type can be placed into a kit. Be sure to order a kit containing;
  - 1. the appropriate number of anti-static bags to contain all of the batteries you wish to recycle
  - 2. anti-static bags large enough to fit the largest size of battery you wish to recycle.
- •The total gross weight of the inside 5.5 L metal can for Supply-363, 364, 365, 366 (LI or LM) not to exceed 4 kg (8.8 lbs).
- •The total gross weight of the inside 5 Gal metal drum for Supply-367, 368, 369, 370, 371 (LI or LM) not to exceed 9.3 kg (20.5 lbs).
- •Lithium content restricted to 5 grams per cell and 25 grams per battery for Lithium Metal, as obtained from the Safety Data Sheet (SDS). (See information on the back page of this document explaining how to calculate lithium content.)
- •Lithium ion cells are restricted to 60 Wh and lithium ion batteries to 300 Wh, as obtained from the Safety Data Sheet (SDS). (See information below explaining how to calculate lithium content.)

NOTE ON LITHIUM BATTERIES: The following guidance should be followed when managing spent lithium batteries in RecyclePak®.

- 1. For purposes of this guidance, we use the term "lithium metal battery" to refer to a non-rechargeable battery and the term "lithium ion battery" to refer to a rechargeable battery.
- 2. A cell is a single electro-chemical unit; a battery consists of one or more connected cells.
  - a. The size of a lithium metal cell or battery is determined by its lithium content as summarized in Table 2 below.
  - b. The size of a lithium ion cell or battery is determined by the Watt-hour (Wh) rating of the cell(s) or battery as summarized in Table 2 below.
- 3. Only those cells and batteries designated as "Authorized for RecyclePak®" in Table 2 below, may be shipped using this packaging. Cells and batteries designated as "Not Authorized for RecyclePak®" in Table 2 below, may not be shipped using this packaging.

TABLE 2- SMALL BATTERY AND CELL DEFINITIONS				
Small Lithium cells and batteries are defined in 49 CFR 173.185(C).				
Cells	Cells Authorized for RecyclePak®			
Lithium metal	5 g Li.	> 5 g Li.		
Lithium ion	60 Wh	> 60 Wh		
Batteries	Authorized for RecyclePak®	Not Authorized for RecyclePak®		
Lithium metal	25 g Li	> 25 g Li.		
Lithium ion	300 Wh	> 300 Wh		

- 4. Generators of Lithium batteries are responsible for proper identification of their spent lithium metal and lithium ion batteries.
  - a. Lithium metal batteries are classified by the quantity of lithium contained in the cell(s) or battery. Battery manufacturers may be able to provide guidance as to the amount of lithium contained in the cell(s) or battery. b. Lithium ion batteries are classified by the Wh rating of the cell(s) or battery. Most lithium ion batteries will be marked with the Wh rating. If your battery is not marked with a Wh rating, Wh can be calculated using the following formula: Wh = Volts(V) xAmpere Hour (Ah). When working with this formula, One (1) Ah is equal to 1000 milliampere hours (mAh). (Wh=V\*(mAh/1000))
- 5. Questions should be directed to 1-888-669-9725.

### **NOTES**

# **Mercury Waste**

Mercury has traditionally been used in medical apparatus, electrical devices, precision instruments and in conjunction with other elements to form compounds for industrial applications. Despite its widespread use, mercury is a highly toxic material that needs to be disposed of properly once it is removed from use.

# **Electronics**

Electronic waste is one of the fastest growing waste streams globally. This has been spurred by increasing technological advances that drive the development of new products and the replacement of outdated equipment. The outdated equipment may contain toxic or hazardous materials, such as cadmium, lead, or mercury which can contaminate the environment if disposed of improperly.

# **Dental Waste**

Most dental offices generate small quantities of hazardous, universal and solid waste in their day-to-day practices. Waste such as mercury, silver, lead, x-ray developer, medical waste, disinfectant chemicals, as well as general office waste needs to be managed correctly to protect health and the environment.

# Tritium Exit Signs

Tritium Exit signs must not be disposed of as normal trash. Damaged signs could contaminate the area and require expensive cleanup.

### SUPPLY-334

### TRITIUM EXIT SIGN DISPOSAL PER SIGN

**DIMENSIONS:** Packaging dimensions dependent upon number of signs.

**CAPACITY:** Capacity varies.

**INCLUDES:** ReturnPak box that meets the general package design requirements of 49 CFR 173.410 with attached return shipping label and UN2911 DOT label, bubble wrap, instructions, terms and conditions, a notification letter addressed to the appropriate state regulatory agency and a notification letter addressed to the US Nuclear Regulatory Commission (NRC), copies of completed tritium exit sign inventory form for your records and to send to the state and federal agencies.

**NOTES:** To properly dispose of a tritium exit sign, general licensees are required to transfer the sign to a specific licensee. The general licensee must file a report to the NRC and Agreement State within 30 days of disposal. The tritium exit sign kit supplies you with the proper packaging and paperwork to assist you with the proper disposal of your exit signs. Once your order is placed, Veolia will send you an informational packet that must be completed, signed and returned before your order is processed.

## **Smoke Detectors**

Depending on where you live and what type of smoke detector you need to dispose of, there may be regulations that apply to the disposal of scrap detectors.

The two types of smoke detectors most commonly encountered in the United States are ionization detectors and photoelectric detectors. Ionization-type smoke detectors contain a small amount of radioactive material. Photoelectric-type smoke detectors do not contain any radioactive material. Combination smoke detectors, which contain both ionization and photoelectric smoke sensors, also contain a small amount of radioactive material.

### **EXTRA SMALL SMOKE DETECTOR DISPOSAL BOX**

**DIMENSIONS:** 8"x8"x8"

**CAPACITY:** Up to 6 intact exempt radioactive smoke detectors. Each smoke detector should contain less than or equaling 1 microcurie of Americium-241 (Am-241). DO NOT EXCEED 3 lbs.

**INCLUDES:** ReturnPak box with attached return shipping label and UN2911 DOT label, poly liner, liner tie, instructions, terms and conditions, Smoke Detector Inventory Form to be completed and returned with filled ReturnPak box.
